Kolkata Traffic Problems

John Burns
Mike Friedman
Nicholas Li
Maxwell Wang
Background

- Strategic location
- 2 major railway junctions
- International airport
- Economic hub of east India
- 8th largest city in the world
Population of cars have tripled in the past 10 years
"Kolkata is a metropolis with a very limited road space and one of the highest vehicle density ratios" – G.M. Police Commissioner
2 million cars for 1400
- Kolkata: 345 vehicles/km
- Mumbai: 448 vehicles/km
- Delhi: 184 vehicles/km
Non-motorized transport

- Slower speed than rest of the traffic
- Don’t follow one-way traffic rule
- Cheap and reliable
- Employment
- Zero- Emissions
- Play Video
## Salt Lake City ↔ Kolkata

Telecommuting

- Promoted with government incentive program
- Can pose significant benefits for:
  - Individual Employees
  - Organization
  - Government
- Information technology jobs tend to be primary candidates for telecommuting
- Assumption that IT jobs grow in proportion to telecommuting jobs
United States DOT did a cost / benefit analysis of Telecommuting in 1993. Estimates seemed ambitious at the time. With an estimated 2% growth rate in IT jobs, predicted 20.2% annual growth in telecommuters. As technology has progressed over the years, estimates have proven conservative even without government incentives.
## DOT Estimates (1993)

</table>
While growth rate of IT jobs in the US is 2%, in Kolkata the rate is 70% (twice India’s growth rate)

Kolkata and its suburbs are populated by over 15 million people

The city itself has an estimated 7 million commuters daily

With the right government incentives, exponential growth in telecommuting would be possible
Overall Incentives

- **Employees**
  - Decreased travel costs
  - Increased time at home

- **Businesses**
  - Increased Employee Productivity
  - Decreased Sick Days (cost >$600/employee/year)

- **Government**
  - Decreased road wear
  - Decreased overall travel time
  - Increased Productivity
Current Solutions Being Planned for Kolkata

- Light Rail Transit System
- East-West Metro
- Elevated Ring Road
Plans for the LRT

- A: Panihati
- B: Joka
- C: Barrackpore
Original plan was to run from Joka to Panihati on a 32km stretch

Extended to Barrackpore with an additional 6km

Will have 37 Stations
High Hopes for the LRT

- Anticipated Commuter Movement from Joka to Barrackpore Estimated to number 27,000 Passengers an Hour

- LRT will connect Northern and Southern districts of the city, spanning almost 40km, in an estimated 90 minutes.

- Anticipation of future vehicular growth the LRT will be an elevated track system
Elevated Ring Road Proposal

- Would Encircle Kolkata, connecting Rajarhat airport, Salt Lake, Shyambazar, Burrabazar, Howrah, Vidyasagar Setu, Behala, Tollygunge, Kalighat, Park Circus, Baghajatin, and Dhapa

- 40.3km Stretch and planned as a six-lane elevated road.
Although a possible solution, the Ring Road has been estimated to cost Rs 8,500 crore or roughly 1.77 billion USD.

Plan of LRT, and 400km of ring roads estimated to cost 19,000 crore.

Vision for 2025, but population estimated to grow to 22mil while the system can only hold 16.2mil.
